

Your Health and Driving Safely

Could Your Medical Condition Cause a Collision?

Did you know that Massachusetts is a self reporting state? That means it is your responsibility to report to the Registry of Motor Vehicles any medical condition that may affect your ability to drive. The purpose of this brochure is to help drivers identify some medical conditions that can lead to impaired driving. The RMV consulted with medical experts before developing regulations about minimum physical abilities necessary for driving, and these regulations apply to all licensed drivers and new applicants. Other standards may apply to commercial drivers.

Arthritis

Arthritis can make it difficult to perform physical activities. Even the simple ones required for driving such as turning your head and neck to check for traffic, reaching the brake pedal quickly in an emergency, and adjusting rear and side mirrors. If you're not sure about whether you can move fast enough in an emergency, see your doctor and consider having a driving evaluation at an outpatient rehabilitation center.

Vision

One of the most important requirements for safe driving is good vision. For an unrestricted license, you must have at least 20/40 vision in one eye (even with glasses) and 120 degrees peripheral vision. If you have 20/50, 20/60, or 20/70 vision and 120 degrees peripheral vision, you can still obtain a driver's license that allows you to drive during the day. If you wear a telescopic lens, special rules may apply.

Hearing

Hearing loss, by itself, does not impair a person's ability to drive. If your family members or doctor tell you that they've noticed a change in your hearing it's important to take note of these warnings. Check with your doctor about any concerns you might have.

Loss of Consciousness

Many medical conditions can cause a person to lose consciousness or "pass out" without warning. Heart conditions, breathing problems, diabetes, seizure disorders and sleep disturbances can affect mental alertness. If you've suffered a loss of consciousness or an episode of altered consciousness (such as low blood sugar, lightheadedness, or disorientation) you **MUST** turn in your driver's license for at least six (6) months. The RMV will provide you with a free Mass I.D. to use during that time. If, after six (6) months, your doctor

certifies that you have been episode free, you can regain your driving privileges. The RMV will provide you with a new license free of charge.

Mental Abilities

Several medical conditions can affect mental alertness and clear thinking without causing the driver to "pass out." Trouble remembering things, confusion, stress, depression and anxiety are all conditions that can affect your ability to drive. Many conditions are temporary and you may only have to refrain from driving during a brief adjustment period.

Drugs and Alcohol

Some prescription medications can cause serious side effects (for example, drowsiness). Massachusetts's law forbids driving while under the influence of narcotic drugs, even with a valid prescription. Always check with your doctor before driving. Prescription medicine may also worsen the effects of alcohol. Also, elderly drivers may find that alcohol affects them more now than it did in their youth. Never drink and drive.
